

SK ABDUL REHEMAN

System Test Engineer

rehemanabdul44@gmail.com

+91-6360255946

PROFESSIONAL SUMMARY

- Having Overall 6+ Yrs of Experience in Verification and Validation as System Test Engineer in Automotive Infotainment Industry.
- Possess strong skills for Manual & Automation Testing in Feature and Component level testing for OEM'S like Renault-Nissan, Mercedes-Benz & Mahindra EV.
- Working experience on tools like Canoe, ET- Framework, CAN/LIN, TCP/IP, UDS, DoIP, Automotive Ethernet Protocols.
- Having experience in Passive safety systems & Telematics Systems (TCU testing) which includes Functional & Validation of HIL/SIL environments.
- Cleared Professional certification - ISTQB CTFL.
- Strong Technical skills on Python Automation, Linux Essentials, QNX & Android (AOSP) testing interfaces.
- Working experience on STLC, SDC & Bug reporting tools like Jenkins, CI/CD pipelines, Verification Robot Framework, Artifactory, JIRA, Xray, RTC.
- Writing the test cases as per the customer requirements from IBM DOORS and reviewing the test cases developed by the other engineers and Preparing Software validation status report.
- Strong interpersonal skills and Ability to prioritize and handle multiple tasks to meet deadlines.
- Having working knowledge on Hardware tools AM and FM signal Generator Like RDS Encoder, DAB, GNSS, Telematics control unit (TCU) & Automated Test environment/Test benches.

EXPERIENCE

- Worked as System Test Engineer at Bosch Since July-2022 to Dec-2025 Under the Payroll of UST Global Pvt ltd.
- Worked as Embedded Tester at Stellantis Chennai, from March-2019 to June-2022 Under the Payroll of Nivis Info Pvt ltd.

EDUCATION

- **BE (VTU)**, BMS Institute of Technology Bangalore with Aggregate 6.5 CGPA in 2016
- **PUC** from Sri Chaitanya Junior college, Hyderabad with 8.9 CGPA in 2012

PROJECT SUMMARY

Project1:

- Project : PIVI ST3.1 Nissan & Renault Infotainment
- H/W Tools : RDS Encoder, DAB Signal Generator, Test Bench setup, GTB, HIL/SIL, TCU
- S/W Tools : Vector-Canoe, Jira, WinCP, PuTTY, DOORS, TTfis.

Project2:

- Project : Mahindra EV & Suzuki DA3
- S/W Tools : Canoe, RTC, WinCP, PuTTY, DOORS, Unitas, Android Studio, Adb & Linux Essentials, Jira, QFIL, AURIX.
- Testing Methodologies : Agile, STLC, SDLC, V-Model, Black Box Testing, Connected vehicle & Performance Testing.

Project3:

- Project : CIVIC Mercedes-Benz Infotainment
- H/W Tools : Automation Test Bench, HIL/SIL, GNSS simulator, TCU
- Testing Methodologies : Agile, STLC, SDLC, Black Box Testing, Connected vehicle & Performance Testing
- S/W Tools : ET-framework, Jira, PuTTY, FlashGUI, Python Automation, Xray, Pycharm, Android Studio, Adb & Linux Essentials, DLT Viewer, Jenkins, GIT, Gerrit.

Brief Description:

Worked on Infotainment Verification & Validation on Test Bench/Automation Bench which includes CAN based validation with the interaction of Infotainment based ECU's. Handled Different Modules Like Audio, BT, Navigation, Diagnostics (UDS), Android Auto, Apple CarPlay, Tuner, FOTA Update, Connectivity, HMI etc. Worked on different OEMs like Renault & Nissan Scope2.0, Scope2.1, Scope ST3.1, CIVIC with different market area selection like NAR, EUR, GCC, ROW, JAPAN etc variants.

Responsibilities:

- Understanding the functional requirements for different modules like Diagnostics, Tuner, Media, Android Auto, Apple CarPlay, USB, Phone and BT, Navigation, HMI etc.
- Good Experience in HIL Platform validation & CANoe based Test Platform using protocols like CAN/LIN, UDS, TCP/IP, DoIP etc
- Performing TCU flashing, ECU/HU flashing & Test Automation using Python and Robot Framework with Python Libraries provided by OEM
- Proficiency in Testing Android (AOSP), Linux or QNX-based systems by following different Testing Methodology's.
- Development of simulated ECUs in Canoe environment for the Infotainment system & Understanding SRS document and verifying workflow using FIGMA.
- Perform System testing on Infotainment HMI features in all possible conditions.
- Tracking requirement analysis, capturing the test cases, preparation of test procedures, flashing the software into device.
- Analyze the test results and report the bugs to respective teams.
- Understanding different tools which are used for the Project testing to verify, validate and test the diagnostic services as per the client requirements.
- Flash the official released software into the Head Unit via USB stick, Over the Air Update (FOTA), Fastboot Flashing, Aurix, QFIL etc.
- Perform Smoke, Regression, Sanity and System Testing for every official software release and raise the bugs and assigned to concerned team.
- Creation of test cases based on the Test Specification documents.
- Collecting Various Logs for the created ticket like D-BUS, ADB LOGS, UART, DLT, VCPU, SERIAL etc.
- Verifying and tracking the bug status using Jira & RTC tool on daily basis and providing necessary reports to higher level management.
